

## Benefits:

-  **Productivity Gains** – *State of the art permit to work system for effective processing and control of simultaneous operations.*
-  **Risk Notification** – *Dynamic Risk Agents (AI function) search for defined risk constellations and notify users when detected.*
-  **Management Control** – *Dynamic monitoring and visualization of current risk picture and ongoing activities, safe access from everywhere, anytime.*

## *Digital Permit to Work System*

### OTG Smart Permit system

Smart Permit is an easy-to-use, web based permit system developed by offshore personnel and domain experts according to best practice in the industry (NOG 088). The permit system is:

- A license based software solution. Easy to implement, low up-front investment, no local installations.
- Works on tablets, smartphones and desktop computers.
- Includes Dynamic Risk Agents (DRA), a unique AI technology developed by OTG in co-operation with the Norwegian leading research institute, SINTEF and offshore industry partners.

Smart Permit is applicable for offshore installations, drilling rigs, process facilities and shipyards. The customized DRA algorithms can be connected and set to continuously search for predefined risk constellations in the available data sets and give notification and warnings to human decision makers when increased risks are detected.
