SMART® INSPECT

Benefits:

- **Increased Productivity** – *Cost efficient* – *enable a better work process and reduce more than 50% the inspection time.*

- **Job satisfaction** – *Uniform reporting format, easy tracking of equipment checklists and progress. More engaging and motivating for the inspectors.*

- **Information Management** – *Last versions of equipment data (manuals, checklists and datasheets) easy organized and available on your device (also when in offline areas).*
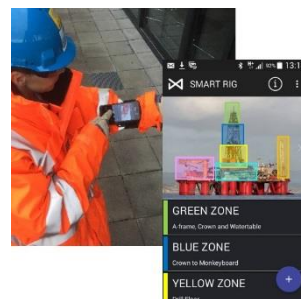

Mobile inspection and document handling system

Smart Inspect - digital inspection system

Smart Inspect is a mobile inspection and document-handling system for rationalization of checklist based site inspections. By Smart Inspect, you are able to double the number of inspections performed on the scheduled time. The mobile Smart Inspect application ensures that:

- You will have access to last version of performance standards and checklists on the work site, anytime, anywhere.

- You can perform your inspections in offline in areas. Collected data will be synchronized upstream to a server when back in areas with internet connection.

- It can be configured and customized to your own inspection needs.

- Inspection reports are auto generated and tracked in the back-end risk management system (offered as a SaaS solution). This is where you configure the checklists and object resources.

- It's easy to implement, no investments, easy to scale. Works on android tablets / smartphones and desktop computers.

Application areas: Routine inspections, EX inspections, barrier inspections, safety checks, housekeeping inspections, inventory control, dropped object protection system, work environment inspection, management audits in construction, aquaculture, agriculture, Oil & Gas, shipping, manufacturing, asset management.
